

**Aero Inspection International** is delighted to make the following announcements.

We have extended our capability to include the Rolls Royce RB 211 series engine. This development allows us to carry out and certify **Full Gas Path Borescope Inspections** on any RB 211 series engine, including the Trent 900. Aii's scope of approval now includes the **CF6, CFM 56, PW 4000, V2500, RB211, JT9D and JT8D** series engines with **borescope** inspection and **boreblend** repair capability.

Recently, Aii purchased new 'state of the art' inspection equipment manufactured by General Electric. This **GE XL G3 Borescope** offers the latest in borescope technology which enables us to deliver a premium inspection report and user friendly interactive DVD.

"We are delighted to add the **GE XL G3 borescope** to our equipment range, due to its high illumination and great picture quality." said Aero Inspection International's Shannon Office Manager, Bryan Butler "I am sure our customers will be happy with the newest edition to our extensive range of borescope and boreblend equipment"

**Aero Inspection International** is an EASA approved Part 145 organisation, available to assist customers on a global and AOG basis.

If you need any further information you can contact us directly at [info@aii.ie](mailto:info@aii.ie) or visit our new website [www.aii.ie](http://www.aii.ie).

Looking forward to working with you in the future.

Yours Sincerely

The Aero Inspection International Team
