AVIATION CLUSTER GROWS AT WESTPARK

The cluster of aviation-related companies based at Westpark Business Campus has grown further with the announcement by Aero Inspection International Ltd of its decision to relocate its headquarters to the campus.

The move comes following a period of significant growth for the company, which expects to continue its expansion at Westpark in the coming years.

Aero Inspection is a European Aviation Safety Agency (EASA) approved provider of video borescope inspections and boroblend repairs on CFMI, GE, Rolls Royce and Pratt & Whitney Aero Engines. The company primarily serves MROs, airlines and the leasing community.

Using the latest technology, an engineer can inspect the jet engine internally, access any

damage, repair it and provide a report and video to the customer. The engine is then certified for return to service. Aero Inspection has a dedicated team of inspectors available to travel worldwide and provide such a service.

"We are very much looking forward to making the move to Westpark," said Aero Inspection's Operations Manager, Mr. Peter Bagnell.

"Established in 2004, the company hopes to continue to grow its market share and to provide a high quality service to all its customers worldwide," he added.
